

Release notes 1.0.1

Features

- Admin: managing and synchronizing projects for partners
- Easier updating through integrated dynaSETUP wizard

Bugfixes

- Fixed cronjobs: some error messages in logs solved
- Fixed cronjobs: multiple recipients for reports avoided
- Several minor bugfixes and translation issues

Improvements

- Extended logging integrated, especially for user login process
- Link to helpdesk in area help corrected (now points to correct helpdesk)
- if setup/index.php file is present, a warning message appears on the login screen (as opposed to earlier redirection to setup directory)
- Trademark signs added to dynaBOARD name

Database Updates

Please note the update guide concerning [database updates here](#).

Important Changes

- you can **only update from version 0.0.5 (beta) to production version 1.0.1**. If your version is older, please manually update to version 0.0.5 or reinstall.
- you only need to delete the setup/index.php file after the update/installation, all other files in the setup directory can (but most not) remain on the server.
